

WHY A WATER KIOSK AT SCHOOL

Financially:

- A microcredit project for schools with a sustainable business model which will create money for the school and thus provide better education.
- A prepaid credit card system ensures that school members pay a lower price per 20litre container of water and that the cost is constantly low during shortage.

Education and Capacity Development:

- Increase school attendance as children no longer need to absent themselves from school to secure water for their families.
- A place for work experience to learn about teamwork, commitment, leadership and responsibility.
- The best way to learn about sustainability, sanitation and hygiene by a practical experience as a school kiosk.

Socioeconomic Opportunity:

- Increased recognition of children having skills and knowledge outside the scope of their traditional roles.
- Children are now able to transport more water to their own houses as well as other members of their family and community.
- A school kiosk will save time and waiting in lines at other kiosks and water points.

Improved Sanitation and Health:

- All sanitation facilities will be improved around the school. The money from the water kiosk will be used to purchase soap and toilet paper for the school children.
- Increased safety as girls do not have to go to remote and dangerous places to fetch water during the night.
